⑩ Coating Type

CODE	Coating
A	Phenolic resin-Halogen free and Pb free, W.V.≤1KV
H	Epoxy resin-Halogen free and Pb free, W.V.≥2KV

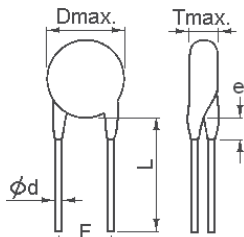

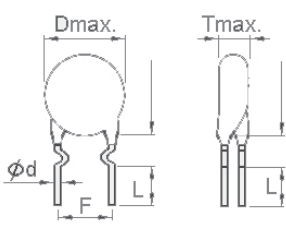

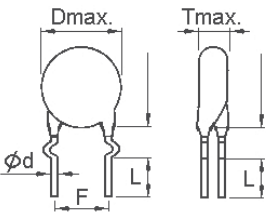

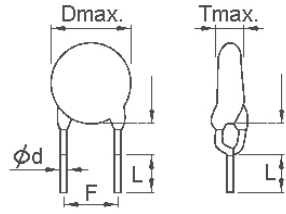

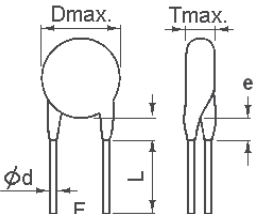

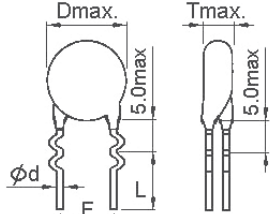

Features:

- Capacitance has linear temperature coefficient
- Capacitance high stability
- Epoxy Coating for 2KV, 3KV,6KV parts (equivalent to UL94V-0 standards)
- RoHS Compliance
- Halogen free products are available
- Low loss at wide range of frequency

General specification:

Capacitance Range	1pF to 820pF (See page 3 to page 6)
Capacitance Tolerance	±0.25pF(for 2~5pF), ±0.5pF(for 6~10pF), ±5%(for 12~820pF),
Operating Temperature Range	-25°C ~ +125°C.
Rated Voltage	50,100, 500,1000,2000,3000,6000 VDC
Q Factor @ 1MHz, 1±0.2 Vrms, 25°C	C≥30 pF.....Q≥1,000, C < 30 pF.....Q≥400+20°C
Insulation Resistance (IR) @ 25°C	10,000 MΩ Minimum
Dielectric Strength	50~500VDC:3 times the rated WVDC ; 1K,2K,3KVDC:2 times the rated WVDC; 6KVDC:1.5 times the rated WVDC.
Testing Parameters	1MHz ±20%, 1.0Vrms±0.2Vrms

Features:

- Large capacitance in small size
- Low loss at wide range of frequency
- Cost saving by placing film capacitors
- Capacitance has linear temperature coefficient
- Stable capacitance change over specified temperature range
- RoHS Compliance
- Halogen free products are available

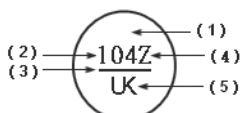

General specification:

Capacitance Range	100000pF
Capacitance Tolerance	+80%-20%
Operating Temperature Range	-25°C ~+ 85°C
Rated Voltage	16,25&50 VDC
Dissipation Factor (tan δ)	Y5V 16V.....tan δ≤7.5% Y5V 25/50V.....tan δ≤5.0%

			50V	Marked as underline		

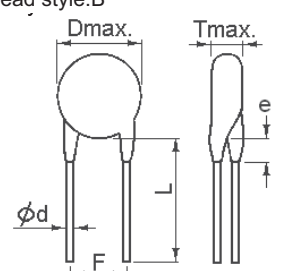

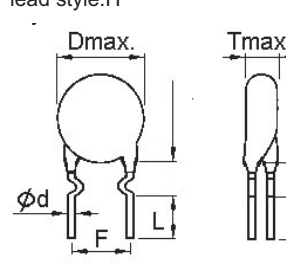

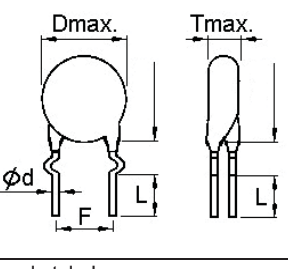

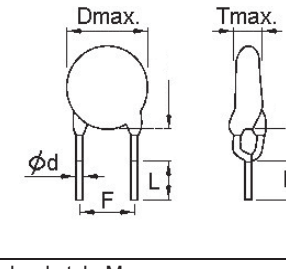

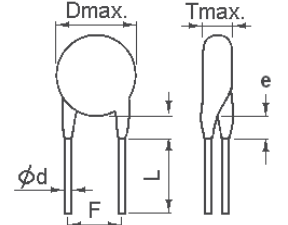

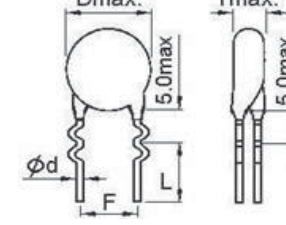

Features:

- Reduced heat dissipation permitted due to small dielectric loss of the ceramic material
- Operating temperature range is guaranteed up to 125 degree C
- Coated with flame-retardant epoxy resin (equivalent to UL94V-0 standards)
- RoHS Compliance
- Halogen free products are available
- Ideal for use on high frequency pulse circuits such as a horizontal resonance circuit for CTV and snubber circuits for switching power supplies

General specification:

Capacitance Range	100pF to 4700pF(See page 14 to page 15)
Capacitance Tolerance	±10%,
Operating Temperature Range	-25°C ~ +125°C
Rated Voltage	1K,2K,3K VDC

■ Caution

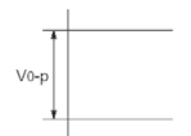

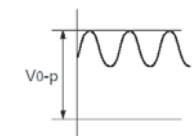

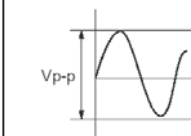

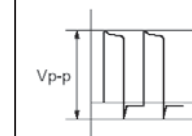

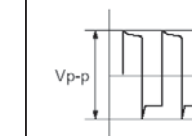

1. Caution (Rating)

1.1 Operating Voltage

When dc-rated capacitors are to be used in ac or ripple current circuits, be sure to maintain the V_{p-p} value of the applied voltage or the V_{o-p} which contains dc bias within the rated voltage range.

When the voltage is applied to the circuit, starting or stopping may generate irregular voltage for a transit period because of resonance or switching. Be sure to use a capacitor with a rated voltage range that includes these irregular voltages.

When using the low-dissipation (LB, LR Char.) series in a high-frequency and high-voltage circuit, be sure to read the instructions in item 4.

Voltage	DC Voltage	DC+AC Voltage	AC Voltage	Pulse Voltage(1)	Pulse Voltage(2)
Positional measurement					

1.2 Operating Temperature And Self-Generated Heat

Keep the surface temperature of a capacitor below the upper limit of its rated operating temperature range, and be sure to take into account the heat generated by the capacitor itself. When the capacitor is used in a high-frequency current, pulse current or similar current, it may self-generate heat due to dielectric loss. The applied voltage load (*) should be such that the capacitor's self-generated heat is within 15°C at an atmosphere temperature of 25°C. When measuring, use a thermocouple of small thermal capacity-k of $\varnothing 0.1\text{mm}$ in conditions where the capacitor is not affected by radiant heat from other components or surrounding ambient fluctuations.

Excessive heat may lead to deterioration of the capacitor's characteristics and reliability. (Never attempt to perform measurement with the cooling fan running. otherwise, accurate measurement cannot be ensured.)

1.3 Fail-Safe

When capacitor is broken, failure may result in a short circuit. Be sure to provide an appropriate fail-safe function like a fuse on your product if failure would follow an electric shock, fire or fume.

1.4 Load Reduction and Self-generated Heat During

Application of High-frequency and High-voltage

Due to the low self-heating characteristics of low dissipation capacitors, the allowable electric power of these capacitors is generally much higher than that of B characteristic capacitors. However, in case the self heating temperature is 15°C under a high-frequency voltage whose peak-to-peak value equals the capacitor's rated voltage, the capacitor's power consumption may exceed it's allowable electric power.

Therefore, when using the Low D.F. series in a high-frequency and high-voltage circuit with a frequency of 1kHz or higher, make sure that the V_{p-p} values including the DC bias, do not exceed the applied voltage value specified in Table 1. Also make sure that the self-heating temperature (the difference between the capacitor's surface temperature and the capacitor's ambient temperature) at an ambient temperature of 25°C does not exceed the value specified in Table 1.

As shown in Fig. 2, the self-heating temperature depends on the ambient temperature. Therefore, if you are not able to set the ambient temperature to approximately 25°C, please contact our sales representatives or product engineers.

[Table 1] Allowable conditions at high frequency

Series	DC rated voltage	Allowable conditions at High-frequency *3		Capacitor's ambient temp. *2
		Applied voltage (Max.)	Self-heating temp. (25°C ambient temp.)*1	
LB、LR	1KV	600Vp-p	15°C Max.	-25 ~ +125°C
		1000Vp-p	5°C Max.	
	2KV	1000Vp-p	10°C Max.	
		2000Vp-p	5°C Max.	
	3KV	3000Vp-p	5°C Max.	

*1 Fig. 1 shows the relationship between the applied voltage and the allowable self-heating temperature regarding 1 to 3KV rated voltage of the low D.F. series LB,LR characteristic.

*2 Fig. 2 When the ambient temperature is 85 to 125°C, the applied voltage needs to be further reduced. If the low D.F. series needs to be used at an ambient temperature of 85 to 125°C, please contact our sales representatives or product engineers.

*3 Fig. 3 shows reference data on the allowable voltage-frequency characteristic for a sine wave voltage.

Failure to follow the above cautions (items 1.1 to 1.4) may result, worst case, in a short circuit and cause fuming or partial dispersion when the product is used.

Fig 1 : Relationship Between Applied Voltage and Self-heating Temperature (Allowable Self-heating Temp. at 25°C Ambient Temp.)

Fig 2 : Dependence of Self-heating Temperature on Ambient Temperature.

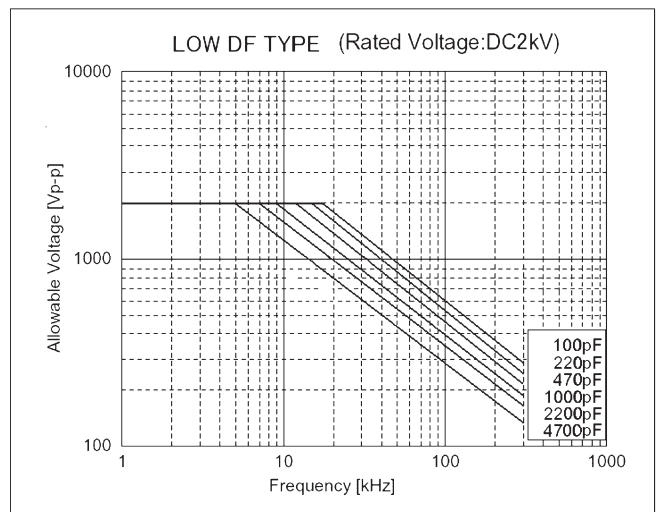

Fig 3 : Allowable Voltage (Sine Wave Voltage) – Frequency Characteristics (At Ambient Temperature of 85°C or less)

CERAMIC DISC CAPACITOR

1KV, 2KV, 3KV Low Dissipation LB,LR Type

Because of influence of harmonics, when the applied voltage is a rectangular wave or pulse wave voltage (instead of a sine wave voltage), the heat generated by the capacitor is higher than the value obtained by application of the sine wave with the same fundamental frequency. Roughly calculated for reference, the allowable voltage for a rectangular wave or pulse wave corresponds approximately to the allowable voltage for a sine wave whose fundamental frequency is twice as large as that of the rectangular wave or pulse wave. This allowable voltage, however, varies depending on the voltage and current waveforms.

Therefore, you are requested to make sure that the self-heating temperature is not higher than the value specified in Table 1.

2. Caution (Storage And Operating Condition)

I. Operating And Storage Environment

The insulating coating of capacitors does not form a perfect seal; therefore, do not use or store capacitors in a corrosive atmosphere, especially where chloride gas, sulfide gas, acid, alkali, salt or the like are present. And avoid exposure to Moisture. Before cleaning, bonding or molding this product, verify that these processes do not affect product quality by testing the performance of a cleaned, bonded or molded product in the intended equipment. Store the capacitors where the temperature and relative humidity do not exceed -10 to 40 degrees centigrade and 15 to 85 %.

Use capacitors within 6 months.

Failure to follow the above cautions may result, worst case, in a short circuit and cause fuming or partial dispersion when the product is used.

3. Caution (Soldering And Mounting)

I. Vibration And Impact

Do not expose a capacitor or its leads to excessive shock or vibration during use.

II. Soldering

When soldering this product to a Pcb / Pwb, do not exceed the solder heat resistance specification of the capacitor. Subjecting this product to excessive heating could melt the internal junction solder and may result in thermal shocks that can crack the ceramic element. When soldering capacitor with a soldering iron, it should be performed in following conditions.

Temperature of iron-tip: 400 °C Max.

Soldering iron wattage: 50W Max.

Soldering time: 3.5 sec. Max.

Failure to follow the above cautions may result, worst case, in a short circuit and cause fuming or partial dispersion when the product is used.

4. Caution (Handling)

Vibration And Impact

Do not expose a capacitor or its leads to excessive shock or vibration during use.

Failure to follow the above cautions may result, worst case, in a short circuit and cause fuming or partial dispersion when the product is used.

■ Notice

1. Notice (Soldering And Mounting)

Cleaning (ultrasonic cleaning)

To perform ultrasonic cleaning, observe the following conditions.

Rinse bath capacity: output of 20-watts per liter or less.

Rinsing time: 5 min. Maximum.

Do not vibrate the Pcb/Pwb directly.

Excessive ultrasonic cleaning may lead to fatigue destruction of the lead wires.

2. Notice (Rating)

Low D.F. series

Capacitance might change greatly depending on the surrounding temperature or an applied voltage.

So, it is not likely to be suitable for use in a time constant circuit. Please contact us if you need detailed information.

Introduction :

Ideal for use as X/Y capacitors for AC line filters and primary-secondary coupling on switching power supplies and AC adapters applications.

Having internationally recognized safety certifications, these capacitors are well-suited for applications that require keeping potentially disruptive or damaging line transients and EMI out of susceptible equipment. They are also an ideal solution in situations where there is a need to suppress line disturbances at the power.

Features :

- Compact size
- Cost effective products
- Ideal for across the line applications
- Safety Standard Recognized for AC applications
- Coated with flame-retardant epoxy resin (equivalent to UL94V-0 standards)
- RoHS Compliance
- Halogen free products are available

Features:

1. MLC Radial Lead Capacitor (RD) has wide application in computer, data processing, telecommunication, industrial control and instrumentation equipment
2. The radial lead MLC is built with superior moisture, and shock resistant epoxy coating material, can be supplied in both, bulk or taping form for automatic insertion
3. RoHS compliance
4. Halogen free products are available
